SUMMARY

Data professional who builds end to end: automated pipelines and API integrations through to the dashboards and applications stakeholders actually use. Experience across data engineering, analytics, and applied modeling, with a track record of turning raw sources into decisions leadership can act on.

SKILLS

Languages: Python, SQL, TypeScript, JavaScript, Java, C++, Bash
Data & BI: pandas, ETL, dbt, Power BI, DAX, data modeling, dashboarding, KPI definition
Integrations & Cloud: REST APIs, OAuth 2.0, FTP/FTPS, Postman; Azure (familiar), AWS Cloud Practitioner (in progress)
Engineering & Tools: Next.js, React, Node.js, Recharts, Docker, Git/GitHub, Jupyter
Delivery: Agile, Kanban, Jira, Confluence, feature-branch Git workflow, CI/CD deployment, secure credential management

EXPERIENCE

University of Illinois — Division of Intercollegiate Athletics

Data Analyst | Oct 2025 – Present

- Built automated Python pipelines replacing a manual multi-step process, extracting six data types across REST API and FTP channels; integrated the API via OAuth 2.0 and parsed 2,400+ structured records.
- Engineered an FTP workflow that filtered a national data-sharing network from ~11,000 files (2.8 GB) to 110 relevant files (23 MB), cutting runtime via MLSD batch listing.
- Partner with leadership to define KPIs and translate business questions into technical requirements, delivering Power BI dashboards backed by Python and SQL.
- Build revenue and expense reporting and leadership-facing presentations in Power BI and PowerPoint, translating financial data into decisions for department leadership.
- Implemented secrets management with environment variables and gitignore policies; work in a team Git workflow with feature branches and pull requests.

Health Analytics Society, University of Illinois

Technical Project Manager | Sep 2025 – May 2026

- Led delivery of a stroke prediction model and a disease outbreak simulation, coordinating engineers, health domain personnel, and leadership using Kanban on GitHub with Jira and Confluence.

NASA Space Apps Challenge — Chicago

Backend Engineer | Oct 2025

- Designed backend architecture and built API endpoints, data processing pipelines, and AI-powered insight modules integrating geospatial and statistical datasets for an urban planning tool.

Publicis Sapient

Product Management Intern | Jun 2025 – Aug 2025

- Integrated large language models into product prototypes and partnered with engineering on technical feasibility.
- Worked in Agile and Kanban delivery cycles using Jira for ticket tracking, Confluence for documentation, and GitHub for version control.

University of Illinois — Division of Intercollegiate Athletics

IT Support Specialist | Aug 2023 – Jul 2026

- Delivered technical support across Windows, macOS, and Linux in a high-volume Zendesk queue; wrote automation scripts to reduce repetitive work.

PROJECTS

- **Basketball Personnel Reporting Tool** (Next.js, TypeScript, Recharts) — Full-stack analytics dashboard across four leagues with an era-adjusted team strength model using recency decay and a valuation model for 1,000+ players.
- **PhishNet AI** — Phishing detection engine scoring messages for fraud risk with plain-language reasoning per classification.

EDUCATION & CERTIFICATIONS

B.S. in Information Sciences, University of Illinois Urbana-Champaign, May 2026 — Minors in Computer Science and Health Technology
Certifications: SAFe® POPM • Certificate in Cybersecurity (Information Trust Institute, UIUC) • CompTIA A+ • CompTIA Security+ (in progress) • AWS Cloud Practitioner (in progress)
